Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/674,925

Applicant(s)

BHARDWAJ ET AL.

Examiner

Shamim Ahmed

Art Unit

1765

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 22 May 2003.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-35 and 38 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☒ Claim(s) 31 and 32 is/are allowed.
- 6) ☒ Claim(s) 1-30, 33-35 and 38 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on _____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☒ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 5/22/03 has been entered.

Response to Arguments

2. Applicant's arguments with respect to claims 1-30 and 33-35 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was

Art Unit: 1765

not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claims 1-10,13-18, 33-35 and 38 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kawasaki et al (4,795,529) in view of Harvey (3,569,777).

Kawasaki et al disclose an apparatus and a process, wherein etching step and deposition step can be carried out alternately.

Kawasaki et al also teach that the two alternating steps have different processing parameters such as the voltage is different in the two alternating steps (col.1, lines 66-68, col.2, lines 1-2, and lines 12-17).

Kawasaki et al, further disclose that the plasma generation for the two steps are stabilized by a matching box, that consists of capacitor (col.3, lines 53-65 and col.16, lines 19-21).

Kawasaki et al remain silent about the step of compensating for a mismatch between the impedance of power supply and the impedance of plasma to stabilize the plasma.

However, in a method of plasma generation, Harvey teaches that an impedance matching network for plasma generating apparatus, which will automatically provide without any required manual adjustment, wherein an impedance mismatch is detected between the generator (power source) and the plasma (col.1, lines 60-68).

Harvey also teaches that the mismatch can be compensated by an impedance converter (col.1, lines 34-45).

Therefore, it would have been obvious to one skilled in the art at the time of claimed invention to combine Harvey's teaching into Kawasaki et al's process for easily generating a stable plasma as taught by Harvey.

As to claim 4, Kawasaki et al teach that the RF power is inductively coupled into the plasma (see figure 1).

As to claims 6-7, Kawasaki et al teach that the matching box is controlled by electrically such as a controller (col. 7, lines 6-20, col.15, lines 28-32).

As to claims 14-15, Kawasaki inherently teach that the capacitors are adjusted to different values for each of the steps because the matching box or matching unit is adapted to control the RF power source.

As to claims 17 and 18, Kawasaki teaches that the positions of the capacitor do not vary between etch and deposition step (figure 16).

As to claim 38, Harvey teaches that changes in process parameter such as pressure affect the impedance of plasma, which could be compensated between the power and the plasma to provide impedance matching (col.1, lines 34-45).

As a result of the impedance matching, it would have been obvious that the process parameter such as pressure could be unchanged.

6. Claims 1-5, 19-25,29-30 and 33-35 rejected under 35 U.S.C. 103(a) as being unpatentable over Okudaira et al (4,985,114) in view of Harvey (3,569,777).

Okudaira et al disclose a process, wherein etching and deposition is performed alternately into a reaction chamber at predetermined time intervals.

Okudaira et al also disclose that at least etching gas and the deposition gas are supplied alternately and for a certain period of time etching gas and deposition gas can be supplied simultaneously and continuously (col.2, lines 41-49 and figures 1 and 3).

Okudaira et al, further disclose that the intensity of the power is controlled by an impedance matching circuit for compensating the high frequency power supply (col.5, lines 15-17).

Okudaira et al remain silent about the step of compensating for a mismatch between the impedance of power supply and the impedance of plasma to stabilize the plasma.

However, in a method of plasma generation, Harvey teaches that an impedance matching network for plasma generating apparatus, which will automatically provide without any required manual adjustment, wherein an impedance mismatch is detected between the generator (power source) and the plasma (col.1, lines 60-68).

Harvey also teaches that the mismatch can be compensated by an impedance converter (col.1, lines 34-45).

Therefore, it would have been obvious to one skilled in the art at the time of claimed invention to combine Harvey's teaching into Okudira et al's process for easily generating a stable plasma as taught by Harvey.

As to claim 19, Okudaira et al teach that the plasma is stabilized by maintaining a reduced pressure of the alternating etching and depositing gas (col.5, lines 38-42).

As to claim 20, Okudaira et al teach that deposition gas is supplied before the etching gas is switched off or vise- versa (see figure 3).

Art Unit: 1765

As to claims 29 and 30, Okudaira et al teach that the pressure is monitored and adjusting the flow of the process gases into the chamber during the alternating etch and deposition steps (col.5, lines 38-42).

7. Claims 11-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kawasaki et al (4,795,529) in view of Harvey (3,569,777) as applied to claims 1-10,13-18,33-35 and 38 above, and further in view of Sadinsky (5,424,691).

Kawasaki discloses above in paragraph 5 but fails to disclose that a motor, which is driven by control signals, drives the matching unit.

However, Sadinsky discloses a method, wherein RF power is adapted through an impedance matching net work, that comprises capacitors and are driven by motor for proper adjustment and further more the motor is driven by a signal generator (col.3, lines 28-34 and lines 60-col.4, lines 5).

Therefore, it would have been obvious to one skilled in the art at the time of claimed invention to employ Sadinsky's teaching into modified Kawasaki et al's method for proper adjustment of the capacitors in the matching unit as taught by Sadinsky.

8. Claims 26-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kawasaki et al (4,795,529) as applied to claims 1-10,13-16 and 33-35 above, and further in view of Leiphart (5882,488).

Kawasaki discloses above in paragraph 5 but fails to disclose that a further gas can be introduced into the chamber to stabilize the plasma.

However, Leiphart teaches that the introduction of an inert gas such as argon or any noble gas can be used into the chamber to stabilize the plasma (col.10, lines 66- col.11, lines 4).

Therefore, it would have been obvious to one skilled in the art at the time of claimed invention to employ Leiphart's teaching into modified kawasaki's method for stabilizing the plasma as taught by Leiphart.

Allowable Subject Matter

9. Claims 31-32 are allowable over prior art.

10. The following is a statement of reasons for the indication of allowable subject matter: The prior art does not teach providing a chamber in which a portion is separated from a main part of the chamber by a deflectable member and also does not teach that the volume of the separated portion is larger than the main part as the context of claims 31 and 32.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Shamim Ahmed whose telephone number is (703) 305-1929. The examiner can normally be reached on M-Thu (7:00-5:30) Every Friday Off.

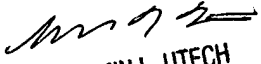

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Benjamin Utech can be reached on (703) 308-3836. The fax phone numbers for the organization where this application or proceeding is assigned are (703)-872-9310 for regular communications and (703) 872-9311 for After Final communications.

Art Unit: 1765

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0661.
